OPERATING INSTRUCTIONS

A: Connect vacuum hose to wand tube

B: Connect solution line to solution valve

C: Adjust carrying handle

D: To apply solution, depress trigger

Place carpet wand on surface to be cleaned and move it at the rate of a slow walk. Apply cleaning fluid by depressing on the valve lever. When using carpet wands, cleaning fluid is applied on the back or pull stroke only. Use only enough downward pressure on the wand to move effectively (push and pull stroke). Use of excessive downward pressure on the wand will decrease efficiency. Always finish cleaning with a dry stroke (closed valve condition). It is very important to keep tools properly seated to the surface being cleaned to produce maximum cleaning effectiveness and minimum drying times. Multiple wet and dry strokes may be used on excessively soiled areas.

ROLLER/GLIDE WAND

If you prefer to use the wand without the roller feature, it can be removed as shown below.

1: To remove roller bar, remove two screws on either side with Phillips screw driver. Remove the roller and both side plates, replace the screws

2: Wand will now operate as a glide wand.
